Description:

Photograv was added to DownloadKeeper this week and last updated on 11-Aug-2018. From bedroom to den, from kitchen to backyard. I worked with several photos, some very poor, and used the Interactive Mode features to help improve the results. This letter describes the experiments that were done to create the parameter set and also specifies the speed, power, and dpi parameters for the Alumamark material. PhotoGraV simulates more than 20 engraving materials including: cherry and walnut wood; clear and black-painted acrylic; black laser brass and anodized aluminum; a variety of generic leather materials; and many plastics with either a white or black core and with a variety of caps including brushed gold and most solid colors.
